

NEW BRAKE ROTORS

PRODUCT INFORMATION

1710-3341

FTK TYPE DISCS (DISKLE)

- Stainless steel fully floating brake rotors
- Outer brake ring features machined and painted rotor slots
- Innovative design improves brake performance and helps cool the rotor faster during extreme use
- Design gives maximum resistance to fade/warp from heat and mechanical stresses
- Rotor design allows for better heat exchange
- Rotor bobbins are stainless steel for efficient rotor "float" so the rotor will not warp and distort under extreme stress/heat
- Stainless steel outer rotor rings are machined and the surfaces finished using a bi-lateral cross-textured grinding process that keeps rotor runout to no more than 0,01 mm
- Rotor weight and inertia are not increased compared to other brake rotor disc types; do not impede the motorcycle's steering/handling characteristics
- Very original style, great for customizers or to enhance the look on older stock bikes
- Manufactured in Europe to ISO/TS 16949 certified standards that meet or exceed OEM specifications
- ABE approved

F TYPE DISCS

- Stainless steel brake rotors
- Proprietary heat treatment ensures homogeneity and consistency of the rotor design
- Machined surfaces are finished using a bi-lateral cross-textured grinding process that keeps rotor runout to no more than 0,01 mm
- All non-machined surfaces are finished using anti-corrosive paint for durability and protection from the elements
- Manufactured in Europe to ISO/TS 16949 certified standards that meet or exceed OEM specifications
- Compatible with all brake pad compounds and aftermarket calipers
