2021 EQUIPMENT GUIDE

BRYCEN NEAL

35 YEARS OF MOOSE RACING

35 years ago a small group of riders with a passion for offroad, and making the ride better, created what today is known as the worldwide leader in two wheel and four wheel parts and accessories. Moose Racing has evolved from a modest offering of hard parts to a global giant with hard parts and gear for both rider and machine.

We are proud of our heritage and equally excited for the future. If you have been with us for the entire journey, we thank you. If you are new to the team, we look forward to having you along for another 35 years. No matter where the ride takes you, we will be there with every turn of the wheel and spin of the wrench.

ABRASION RESISTANT GLOVE LINERS

- Tuff-n-Lite® material is ounce for ounce up to 15 times stronger than steel, but it's as soft and flexible as cotton
- Tuff-n-Lite® is created by a unique, multi-patented process that combines natural and synthetic fibers for almost unimaginable strength
- Tuff-n-Lite® has a core fiber that's combined with strands of other fibers - that give characteristics like strength, abrasion-resistance, heat-resistance and softness
- Tuff-n-Lite® will not sacrifice its strength when wet or exposed to ultraviolet sunlight
- Unlike the high-strength fiber fabrics, it is not affected by disinfectants or common household bleaches
- Helps protect against chafing and blisters while riding and provides insulation while cold-weather riding

NEW MIPS TECHNOLOGY!

HOW MIPS WORKS

In a helmet with MIPS Brain Protection System (BPS) the shell and the liner are separated by a Low Friction Layer. When a helmet with MIPS Brain Protection System is subjected to an angled impact, the low friction layer allows the helmet to slide relative to the head. The MIPS BPS is designed to add protection in helmets against the rotational motion. The rotational motion is a combination of rotational energy (angular velocity) and rotational forces (from angular acceleration) that both affects the brain and increases the risk for minor and severe brain injuries. MIPS BPS has been scientifically proven to reduce rotational motion when implemented in a helmet by absorbing and redirecting rotational energies and forces transferred to the brain.
