MOOSE
RACING

In 1986 a group of riders decided to find a way to make their trail experiences better, and their efforts evolved into Moose Racing. A few trail tools and hard parts soon became the standard for outfitting riders from head to toe in stylish and functional gear. Since then, Moose Racing has evolved into a global giant providing both rider and machine with the largest selection of off-road products on the market.

ABRASION RESISTANT GLOVE LINERS

- Tuff-n-Lite® material is ounce for ounce up to 15 times stronger than steel, but it's as soft and flexible as cotton
- Tuff-n-Lite® is created by a unique, multi-patented process that combines natural and synthetic fibers for almost unimaginable strength
- Tuff-n-Lite® has a core fiber that's combined with strands of other fibers - that give characteristics like strength, abrasion-resistance, heat-resistance and softness
- Tuff-n-Lite® will not sacrifice its strength when wet or exposed to ultraviolet sunlight
- Unlike the high-strength fiber fabrics, it is not affected by disinfectants or common household bleaches
- Helps protect against chafing and blisters while riding and provides insulation while cold-weather riding
- Available in heather gray in sizes MD - 2X

MIPS® NEW MIPS TECHNOLOGY!

HOW MIPS WORKS

In a helmet with MIPS Brain Protection System (BPS) the shell and the liner are separated by a Low Friction Layer. When a helmet with MIPS Brain Protection System is subjected to an angled impact, the low friction layer allows the helmet to slide relative to the head. The MIPS BPS is designed to add protection in helmets against the rotational motion. The rotational motion is a combination of rotational energy (angular velocity) and rotational forces (from angular acceleration) that both affects the brain and increases the risk for minor and severe brain injuries. MIPS BPS has been scientifically proven to reduce rotational motion when implemented in a helmet by absorbing and redirecting rotational energies and forces transferred to the brain.
