NEW MIPS TECHNOLOGY!

HOW MIPS WORKS

In a helmet with MIPS Brain Protection System (BPS) the shell and the liner are separated by a Low Friction Layer. When a helmet with MIPS BPS is subjected to an angled impact, the low friction layer allows the helmet to slide relative to the head. The MIPS BPS is designed to add protection in helmets against the rotational motion. The rotational motion is a combination of rotational energy (angular velocity) and rotational forces (from angular acceleration) that both affects the brain and increases the risk for minor and severe brain injuries. MIPS BPS has been scientifically proven to reduce rotational motion when implemented in a helmet by absorbing and redirecting rotational energies and forces transferred to the brain.

- Tuff-n-Lite® material is ounce for ounce up to 15 times stronger than steel, but it's as soft and flexible as cotton
- Tuff-n-Lite® is created by a unique, multi-patented process that combines natural and synthetic fibers for almost unimaginable strength
- Tuff-n-Lite® has a core fiber that's combined with strands of other fibers that give characteristics like strength, abrasion-resistance, heat-resistance and softness
- Will not compromise when wet or exposed to ultraviolet light
- Not affected by disinfectants or common household bleaches
- Help protect against chafing and blisters while riding
- Provide insulation while riding in colder temperatures

UNDERWARE GLOVE LINERS

ORIGINAL, QUALIFIER OR ULTRA

- Designed to be worn inside normal cold weather riding gloves
- Liners take the beating that palms and lower fingers usually endure from the inside of the riding gloves
- The DuPont™ Kevlar® fibers of the UnderWARE liners absorb the friction between glove and hand that would otherwise cause blisters, including the chafing and rubbing that hands normally endure while riding through the whoops or trails
- Almost no chance for blisters and the material is machine washable, right along with all the rest of the riding gear, for easy maintenance
- Original style features full fingers, and Qualifier style features open fingers
- Ultra style features waterproof material and is recommended for wet conditions where hands are moist from perspiration; material will not absorb moisture

LAYERING

LAYERING SYSTEM

A proper layering system is the key to staying warm and dry while riding. Choosing the right layering garments is the first step towards this goal. Cotton-based products are absolutely not part of a layering system. This includes sweatshirts and denim products.

During the activity of snowmobiling you generate moisture (sweat). The harder you ride, the more moisture you generate. Cotton products trap this moisture, which in turn, transmits cold directly to your body.

BOBSTER®

BOBSTER® DNA

Bobster® prides itself on leading the pack when it comes to technology. All our products feature optically correct, polycarbonate shatter-resistant lenses that offer 100% UVA & UVB protection. We also offer products with Rx ready frames, polarized lenses, photochromic lenses, and all-new High-Definition lenses.

HIGH-DEFINITION LENSES

High-Def lenses will enhance your vision whenever worn.

What this technology does is elevate individual colors, which enables you to see imperfections in the road, changes in the water, or divots in the dirt much easier.

Without having to strain your eyes to see what is coming up, you can anticipate and react with more precision while filtering out harmful UV rays, leading to overall greater visual comfort.

POLARIZED LENSES

While ordinary tinted lenses reduce brightness, only polarized lenses eliminate glare.

To ensure the impact resistance of the lenses, Bobster® uses polycarbonate polarized lenses while most other companies use polarized lenses that will shatter on high impact.

PHOTOCHROMIC TECHNOLOGY

Bobster® photochromic lenses are available in a variety of eyewear styles and are precisely designed to automatically darken/lighten to the amount of ultraviolet (UV) light that reaches the lens.

The advantage of a photochromic lens is that you can wear your eyewear all day and not have to carry multiple sets of eyewear with you or change your lenses according to light conditions.

Do not leave photochromic lenses in direct sun or extreme heat for long periods of time as it will decrease the performance of the lenses.

REPLACEMENT WINDSHIELDS

CLEAR, SMOKE AND GRAPHICS

- Precision cut to match OEM exactly
- Made from .075" thick Uvex butyrate, which is heavier than most OEM models yet stays flexible at subzero temperatures (.100" thick windshields are also noted in chart)
- All windshields have permanently bonded trim for safety
- Graphics windshields are silkscreened to a solid black color at the base to cover mounting area, then fade out as they move up the windshield for style
- Several heights available (see chart)
- Tight quality control for a quality fit; manufacturer guarantees windshields against defects in material and workmanship

NOTE: All windshields are clearly labeled and shrink-wrapped so that your customers receive clean, unmarked, high-quality windshields. Upon receiving, please verify that your windshields are correct before removing the plastic shrink-wrapping.

POWERMADD

PIVOT-STYLE RISERS

- Machined from 6061-T6 aluminum for maximum strength; includes bolts and clamps
- Use as a direct OEM pivot riser replacement to customize bar height or with PowerMadd pivot adapter kit (wide pivot riser only)

NOTE: Designed for a "T" style steering post; with the use of a Pivot Adapter Kit the Pivot-Style Riser blocks can be used on a flat steering post.

NOTE: See extended-length brake lines in the Brakes section.

POWDER PRO SKIS

- Provide the ultimate in loose-snow performance for maximum flotation and precise steering control
- Patented bottom design with a multilevel keel
- Only the lower keel contacts the snow in packed-snow conditions; shares design features with SLT skis to provide precise steering with reduced darting
- Upper keel comes into play in deep powder and loose snow; sidewall adds steering control
- Compaction Control Technology (CCT) uses powder control wings to direct snow under the ski, where it is compacted to add ski lift
- Deep-snow steering ability is increased along with low-speed mobility
- Add front-end lift, which reduces drag on front end components such as the belly pan, bulkhead, front suspension and steering components

SHAPER BARS

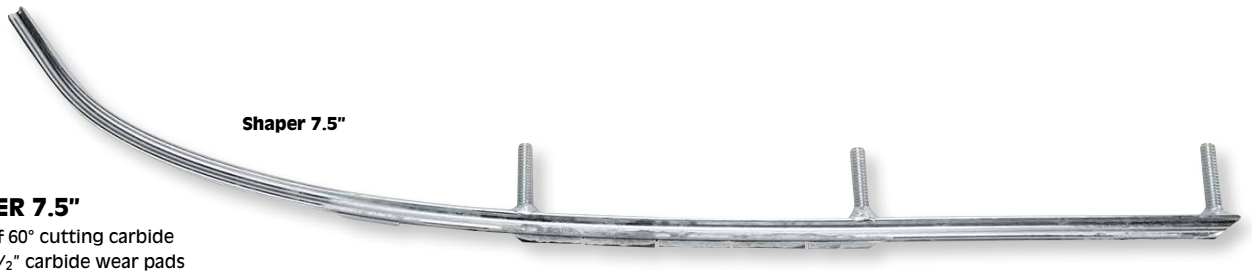

- The first major breakthrough in wear bar technology since the 1950s
- Unique corner-carving hourglass design yields better control at speed with no increased steering effort
- Better tracking on trails – hourglass wear bar shape catches snow from ski sides to make steering more positive
- Average of 1' - 2' tighter turning radius in soft snow conditions
- 20% lighter than conventional 1/2" diameter round wear bars
- Zinc-plated for corrosion resistance
- Lifetime wear rate is nearly equal to current round and square wear bar types
- Manufactured by Stud Boy
- Designed and tested by USI
- Sold in pairs

NOTE: Some models require drilling extra holes in the skis.

SHAPER 9"

- 9" of 60° cutting carbide
- Two 1 1/2" carbide wear pads

SHAPER 7.5"

- 7 1/2" of 60° cutting carbide
- Two 1 1/2" carbide wear pads

SNO STUFF X-calibar™

CARBIDE RUNNERS

- Sno-Stuff has completely redone and improved bar selection to better reflect industry changes
- All bars feature extended studs for convenience
- All carbides use the same $^{7}/_{16}$" bar stock with the exact same 60° controlling carbide and 1" wearpads, the only difference being the length of the controlling carbide
- 60° controlling carbide is physically larger and stays sharper for greater control and longevity

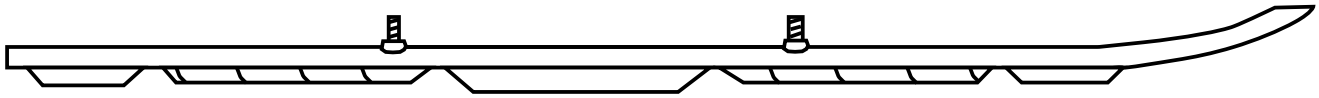

NOTE: Some models require drilling extra holes in the ski.

507 SERIES CARBIDE

8" 60° CONTROLLING CARBIDE

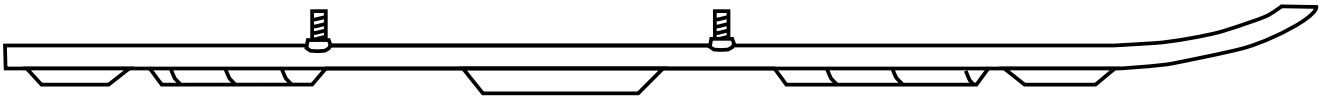

- Designed for the racing enthusiast and demanding trail rider
- $^{7}/_{16}$" bar has 8" of controlling carbide and two 1" wear pads for excellent control and extreme wear resistance

6" 60° CONTROLLING CARBIDE

- Sno-Stuff has increased this $^{7}/_{16}$" bar's controlling carbide to a full 6"
- Perfect for high-performance machines and studded tracks
- Two 1" carbide wear pads front and rear

505 SERIES CARBIDE

4" 60° CONTROLLING CARBIDE

- Sno-Stuff's most popular carbide runner
- 4" x 60° of controlling carbide provides great steering control and longevity
- 1" tapered carbide wear pads front and rear provide exceptional wear resistance when compared to traditional hard surface bars

TRACK APPLICATION CHART

- Camoplast offers a wide range of tracks for nearly every machine and any application
- Tracks are organized into six categories: high-performance trail, touring, cross country, mountain, racing and utility
- To find the track that suits you, locate your sled in the application chart, identify the size width, length and pitch and reference that size under the particular track categories

NOTE: Not all tracks can be installed on all sleds without modification. The listings in the application chart fit OEM suspension, track width, length, and drive pitch only. To determine if an optional track is compatible with a particular snowmobile, you must check the bulkhead, tunnel, heat exchanger, and suspension wheel positioning for proper clearance. It is your responsibility to verify that there is adequate clearance for an optional track.

Camso's Cobra Track Lug

Camso's Cobra track has a unique lug design with 'traction teeth' that protrude about 0.100" above the lug. Available to stud are 2 lug heights: 1.352" (1.250" w/o traction teeth) & 1.600" (1.500" w/o traction teeth). On this track, Woody's recommends 3/8" max stud penetration above the most prominent lug height. With that, the 1.352" Cobra should take a 1325 series stud, and the 1.600" Cobra, a 1575 series stud. Keep in mind, the stud series is NOT the overall length.

These guides have been developed to simplify the studding process.

Examine the illustration above to understand the terminology related to studding.

After determining your track lug height, use the left chart to correspond the appropriate stud length and find your stud series.

As shown in the illustration, the stud series is the length (in inches) from the top of the backing plate to the tip of the properly torqued stud. This series is incorporated into **Woody's** part #.

No matter which style of stud you choose, the series # will give you the correct length.

Example: Series 1325
Woody's Part #: GDP6-1325 | SSP-1325 | GMP-1325 | etc.
Once you know the series, any style stud (appropriate for single-ply or two-ply) can be selected with that #.

Use the chart to the right to find the total qty. of studs needed based on track length & desired studs per lug.

Always be sure to use the appropriate length of carbide runners with your studs for balance & optimum control.

Consult a snowmobile dealer regarding the possibility for additional tunnel protection required.

Prior to studding, review the snowmobile manufacturer's studding recommendation in your owner's manual. You may void your warranty if their recommendations are not followed.

Gates G-FORCE

G-FORCE C12 DRIVE BELTS

- Minimal stretch under load results in consistent shifting RPM
- Allow for maintaining peak power throughout the shift curve
- Wear evenly to reduce belt failure due to edge cord pullout
- Engineered for drop-in performance, featuring exceptional strength, flexibility and durability
- Utilize a carbon tensile cord, combining minimal stretch with extraordinary strength
- High-performance neoprene with a trapezoidal top-notch and rounded-bottom cog design maximizing heat control and flexibility
- Carbon tensile cords are bonded to aramid fiber-loaded rubber with specially formulated adhesion gum; this results in increased side-load resistance, preventing belt distortion and edge-cord pullout
- Gain optimal power transmission for faster acceleration, improved throttle response and consistent shifting performance
- See pages 351-382 for fitments

COMET 108 4-PRO

- Comet 108 4-Pro clutches now accept OEM starter rings
- Added fourth load-bearing member increases roller and button life
- These race clutches are for high-performance applications ONLY
- Clutch uses four clutch weights to greatly enhance tuneability
- To determine arm, add weight of three arms used in 108-EXP, add 14%, then divide by four; this will be the new arm weight to use
- Arms can be used in sets of two to better zero-in on desired weight
- Uses same springs as 102-C and 108-EXP clutches
- Captivated tower allows shouldered cover bolts to virtually eliminate tower spreading
- Each features a new bushing in the movable face and redesigned fixed face for increased durability

NOTE: For calibrations contact a high performance specialist or Certified Parts Corporation.

COMET 108-EXP

HIGH-PERFORMANCE CLUTCHES

- Designed for more power, more endurance, more of everything you need for speed – and now accept OEM starter rings for electric starters
- Tried, tested and built to handle high-horsepower engines
- Consistently smooth shifting even after hours of use
- Wider rollers for increased bearing area (33% more)
- 1997 and newer 108-EXP clutches include special recessed mounting bolt with special pilot washer
- Each features a bushing in the movable face and redesigned fixed face for increased durability
- Uncalibrated clutches are sold without cam arms and spring

NOTE: 108-EXP clutches use the same cam arms and spring as the 108-C.

NOTE: A flush bore depth indicates the taper begins exactly at the inner edge of the fixed face casting. Positive (+) numbers indicate the taper starts the specified distance into the casting; while negative (-) numbers indicate the taper begins in an extension out of the fixed face casting. See illustration on Parts Identification page. Belt width can be adjusted on clutch models that list more than one dimension. Std. = Clutch is pre-set to the belt width listed. Opt. = Clutch can be adjusted to the belt width listed.

NOTE: Change any 108-EXP clutch to accept $1^{7}/_{16}$" belt width by installing one spacer washer under the spider washers from belt spacer kit PART #214393.

102-C/108-C/108-EXP/ 108 4-PRO CAM ARMS

CAM ARM PROFILES

- All cam arms sold here are either original equipment in the Comet drive clutches or a popular replacement for trail riding or racing
- 102-C, 108-C and 108-EXP clutches all use the same basic cam arm
- 108 4-PRO clutches use FOUR cam arms. (To find the required cam arm weight, add the weight of three cam arms used in a 108-EXP or other three-post clutch, add 14%, then divide by FOUR. This will give you the required new cam arm weight.)
- When ordering cam arms for a 108 4-PRO clutch, you must order FOUR cam arms to get the correct weight
- All cam arms sold each

NOTE: All cam arms are sold EACH. You must order FOUR of these arms to get the correct cam arm weight for a 4-PRO clutch and THREE for the 102-C/108-C and 108-EXP clutches.

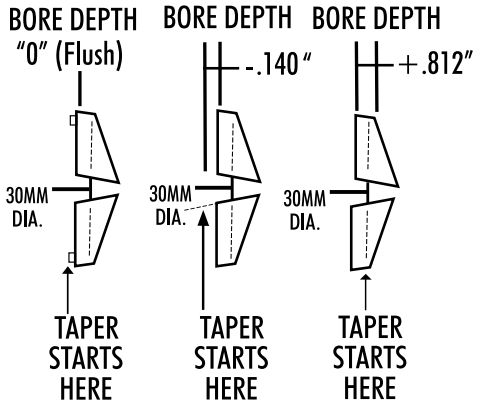

NOTE: Comet arm weight objective is within .75 grams of that listed. Certified weights would be significantly more expensive. The variance may occasionally exceed 2 grams and is a result of greater or lesser arm density.

[1] A flush bore depth indicates the taper begins exactly at the inner edge of the fixed face casting. Positive (+) numbers indicate the taper starts the specified distance into the casting; negative (-) numbers indicate the taper begins in an extension out of the fixed face casting. See illustration below.

[2] Comet Duster PART #206094 fits the majority of all snowmobile crankshafts not specifically listed above and which do not use an oil pump gear or ring gear on the back of the clutch. Included are most BSE, CCW, Fuji, Hirth, JLO, Kawasaki, Kiekhaefer, Kohler, Mercury, Rotax, Sachs, Suzuki, Spirit, Tohatsu and Xenoah engines. Belt spacer kits are available for wider belts. Also adapts to 25mm tapered shafts with adapter PART #204799.

[3] To use this clutch with $1^{1}/_{4}$" belt, order Belt Spacer Kit PART #205828; to use $1^{5}/_{16}$" belt order Belt Spacer Kit PART #205829; to use $1^{3}/_{8}$" belt order Belt Spacer Kit PART #205830.

[4] This crankshaft PTO size is sometimes referred to as 32mm to distinguish it from standard 30mm PTO shafts which extend into the clutch bore approximately $1^{1}/_{4}$". The 1:10 taper is the same, however. Clutch diameter is $7^{1}/_{4}$", which is smaller than the Polaris-built models it replaces.

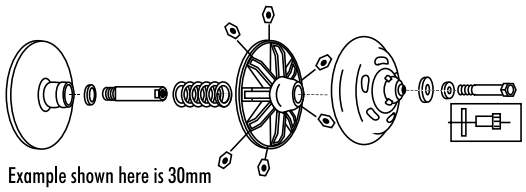

[5] Fits most 1976-87 fan cooled twins such as Blizzard 5500, M/X, Everest, Futura, Grand Prix Special, Nordik, Skandic and Sonic.

[6] Application is limited to twin cylinder models with an oil pump gear attached to the back side of the clutch. Will not fit GP433 1974-75 or GP440 1976.

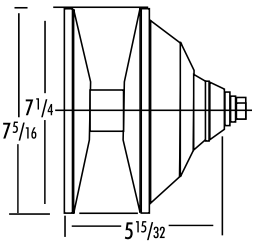

[7] Fits older singles and twins plus Elan 247 Type singles 1971-90 and Spirit 1976-83. Original fixed half clutch shaft is round and measures 1" OD.

[8] Original equipment fixed half clutch shafts thru 1974 are round and measure $1^{1}/_{8}$" OD 1975-82 models have a square fixed half clutch shaft. For $1^{5}/_{16}$" belt width models such as Alpine 640 1976-82, order belt spacer kit, PART #205829.

[9] Ribbed cover is for improved cooling on hard-use applications. Fits the same applications as clutch PART #206094.

Example shown here is 30mm 1:10 tapered bore model.

BMP BIKEMAN PERFORMANCE

STAGE 2 TORSION CLUTCH KITS

1141-0299

- Huge acceleration and track speed gains
- Much better all-around clutching performance and "feel"
- Quicker back-shifting (down shift)
- More consistent clutching that holds RPM
- Lower clutch temps and longer belt life
- Lower belt temps further with the floating belt deflection tool PART #1141-0281; available separately
- Includes setup guidelines for model and modifications
- Easily adjustable for fine tuning
- 1100 Turbo clutch kits work both with or without tuning
- Includes Goldstar magnetic adjustable clutch weights, primary spring, adjustable torsion conversion helix, and a torsion secondary spring
- Torsion secondary spring tool PART #1141-0283 works on all 05-Up Arctic Cat secondary clutches with Bikeman torsion conversion kit; available separately and highly recommended (see TOOL SECTION)

NOTE: 2-stroke models with engine reverse may have an issue when engaging reverse drive. Must slowly and easily engage the clutch when in reverse. Only try to use reverse under light load situations like off the trailer, or on flat ground. Harsh engagement or high load situations can cause the clutch to miss the reverse notch and drop the belt to the bottom of the sheaves.

PIPE TEMP SENSOR BLOCK-OFF

FOR ARCTIC CAT MODELS 11-18 WITH FACTORY TEMP SENSOR

- Eliminates the factory sensor
- Use with caution as warm-up and over-temp modes will no longer be active
- This will show the sensor being at optimum running temp at all times
- Includes resistor plug and exhaust bung cap

NOTE: The stock sensor is in place to adjust fuel and timing during cold (warm up) and in overheat conditions. Removing this sensor will provide more consistent results when tuning the machine, especially with aftermarket parts. However, it will also disable some factory safety features. An auxiliary EGT gauge is highly recommended when using this product.

PART #	1861-1261

MUFFLER SENSOR ADAPTER

FOR SKI-DOO E-TEC MODELS

- Sensor adapter solves peak RPM loss problems
- Aluminum finned design dissipates heat to aid in cooling the sensor
- Adapter moves the sensor out of the extreme heat inside the muffler, allowing your machine to hold maximum RPM all the time
- Threads into muffler, then simply thread the sensor into the adapter
- Will not work with the stock muffler, only aftermarket mufflers

NOTE: Adapter will cause the sled to run leaner. This is necessary for models which lose peak RPM because the sensor reads too hot. We do not recommend running this adapter unless you notice a problem with your sled.

NOTE: Not recommended on 2014 models. 2014 models, or older models with the piston and ECU update should not use this sensor adapter as it will make the sled run too cool. Most 2014 or older models with the updates will be fine with no adapter. Your Ski-Doo dealer now has a re-flash for adding an aftermarket muffler which is highly recommended.

ERA 2014 Silencing Technology

TUNED EXHAUST SYSTEMS

- SLP pipes offer increased efficiency, more torque and horsepower with a wider powerband
- SLP's ERA 2014 Silencing Technology features silencing designs combined with some exotic materials and manufacturing techniques, which together offer low sound level at a much lighter weight
- SLP's ERA 2007 Silencing Technology features advanced silencing technology while still providing great weight savings and a rich, full sound
- Models equipped with this latest technology still sound like a snowmobile should, but the level of sound output is lower than previously experienced with our ERA 2000 products
- Famous for superb fit and finish for easy installation
- Check the description of each pipe to find the one right for you and your machine
- For the highest level of performance, contact Starting Line Products for their recommended tuning and clutching parts
- Finish codes: C (ceramic-coated), B (black hi-temp paint)

NOTE: All carbureted models require clutching and jetting changes. EFI models require clutching changes and, in some cases, a fuel control module.

HEADER WRAP KIT

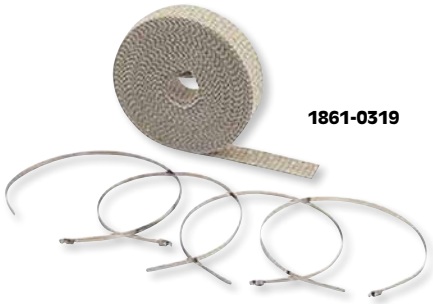

- Kit features laser-cut Vance & Hines wrap clamps, black header wrap tape and locking stainless steel ties
- Black, fiberglass composite wrap tape helps lock in the heat and reduces radiant heat by a realistic 50%
- Kit includes 25' roll of black wrap tape, two Vance & Hines wrap clamps and six locking stainless steel ties

IMPORTANT NOTICE: Use of this Vance & Hines Header Wrap Kit (PART #1861-0622) may void all warranties of the exhaust system that this Kit is applied to. Header Wrap functions to insulate heat generated by exhaust gases flowing through the headpipe, thereby raising the headpipe temperature beyond its intended operating temperature. Using heat wrap may compromise the integrity of the headpipe material, and may ultimately lead to cracks in the headpipe and will not be covered under warranty. Use of header wrap on an exhaust system is a modification to and not a normal use of an exhaust system. This notice is intended to inform the buyer to consider this possibility before using this product.

- Rollers are made from bearing steel (JIS SUJ-2/SAE 52100/DIN 100 CR6) and have been subjected to heat treatment and precision grinding radius diameter deviation; the hardness is HV700-860 (HRC60-66)
- All the raw material comes from Japan directly
- High-purity Chromium Molybdenum alloy steel (JIS SCM415) with Carbon Nitriding heat-treatment process
- The hardness specification is at HV500~HV600; it always can meet the requirements of high-speed engine applications
- Heat-treated and ground to precision tolerances for reduced heat and extended life

HOT RODS

CONNECTING ROD KITS

- Manufactured from hot-rolled ASTM 4115 and case-hardened to 58-62 Rc.
- Features the latest in caged needle roller bearing designs for high rpm
- Uniquely designed big end uses strategically located side scalloping and vent slots to minimize bearing race distortion at high rpm
- Shot-peened to eliminate surface stress risers and to smoothly blend together the rod forging's radiuses
- Double honing produces an ultra-round bearing surface for reliability at high rpm
- Small ends are double drilled to supply extra lubrication and cooling to the wrist pin bearing, which is especially important when the piston crown is close to the wrist pin bearing
- Rod assembly sold complete with rod, crank pin bearing, top-end bearing and silver-coated bronze phosphor thrust washers

COMETIC GASKET

HI-PERFORMANCE SNOWMOBILE GASKETS AND GASKET KITS

- Gaskets and gasket sets used by professionals in high-performance machines and as OE replacements worldwide
- Materials may vary depending on what is correct and engineered for specified application
- Each PART # contains the proper amount of gaskets for one application

CRANKSHAFT SEAL KITS

- High-quality, domestically made oil seals that are sold in a set containing both crankshaft seals per application

EXHAUST GASKET KITS

- Exhaust gasket kits are made for extreme temperatures, utilizing a steel-tanged outer layer that bites into the Armor-400 inner layer (heat-resistant to 1,800 degrees Fahrenheit), providing ultimate strength from blow-outs or push-outs created by over-torqued situations
- 4-stroke applications utilize a double-sided Viton® rubber-coated stainless steel gasket providing precise, high-temperature sealing capabilities in all conditions
- Sold as a set

INTAKE GASKET KITS

- Intake gasket kits are made using either a .020" thick aramid fiber material or an AFM material that is comprised of a compounded nitrile synthetic rubber bonded to an aluminum core with an 85% recovery rate while maintaining strong torque retention
- AFM does not require gasket sealers or retorquing
- Intake gasket kits are designed to resist pushing out from excess torque being applied and are designed for long life

EXHAUST POWER VALVE KITS

- Exhaust power valve kits are made from either .020" thick aramid fiber or an AFM coated aluminum core gasket assembly with superior strength and ease of use

COMPLETE AND TOP END KITS

- 4-stroke head gaskets are made to perform on today's highest-output 4-stroke naturally aspirated and boosted machines, utilizing a multi-layered steel design with embossed and Viton rubber-coated outer layers; these head gaskets are designed to meet the demands of today's high-horsepower, high-cylinder-pressure engines
- MLS head gaskets promote an even torque load across the gasket sealing surface, providing less bore distortion and better piston ring seal for more power
- Top End Kits contain every gasket, sealing washer, O-ring and oil seal needed to seal from the base gasket upwards
- Complete kits contain every gasket, sealing washer, O-ring and oil seal needed to completely seal one engine

VFORCE3 BY MOTO TASSINARI

V-FORCE 3 REED VALVES AND REPLACEMENT REEDS

- Snap-together cage uses symmetrical reed petals, eliminating the need for different "inner" and "outer" replacement petals
- Reed tip shape accelerates air mixture, ensuring increased airflow for increased horsepower
- Innovative design completely eliminates need for screws
- When ordering replacement reeds, order one set per reed cage and confirm replacement reeds have the same number of petals as the set you are replacing

HIGH FLOW™ INTAKE KITS

- Maximize your sled's intake efficiency with an SLP High Flow™ intake kit
- Kits are designed specifically for each model to optimize the airflow to the engine
- This is achieved in two ways: first, we provide more available air and reduce the chance of getting plugged up or bogged down by adding more intake surface area using a model specific intake grate that includes a powder snow pre-filter; second, by eliminating flow restrictions in the stock system, we increase intake airflow volume for improvements in horsepower and throttle response

OPTIMATE 4 DUAL PROGRAM

WEATHERPROOF DESULFATING BATTERY CHARGER/MAINTAINER

- The OptiMate 4 saves neglected, deep-discharged batteries that other smart chargers can't
- Ideal for all AGM, GEL and standard filler cap batteries from 3 to 50Ah
- IP64 weatherproof sealed enclosure with built-in mounting option
- Now compatible with either conventional or CAN-bus motorcycle electrical systems
- Switch between STANDARD or CAN-bus programs with a simple five-step procedure (charger comes preprogrammed STANDARD for conventional electrical systems); you can switch programs as many times as you want. LED indication confirms the CAN-bus program is active
- Previously, when the battery in a CAN-bus system was fully charged and a charger moved into the maintenance program, the CAN-bus system would automatically disconnect the charging circuit and require intervention from the user to reactivate
- With the OptiMate 4 DUAL PROGRAM, it is now possible to automatically charge and maintain CAN-bus equipped motorcycles via their convenient external 12V charging port, without use of the ignition key or reactivation (CAN-bus connection cord sold separately)
- Control panel with 10 LEDs display all vital battery information
- Cable bushings avoid insulation stress in ultra-cold temperatures
- SAE weatherproof connections
- Provides optimal maintenance of your battery during long-term storage, achieved by its gentle maintenance cycle, which automatically allows the battery to rest for 30 minutes of each hour of the maintenance cycle while it remains connected
- Includes fused eyelet connector for permanent mounting and battery clip set for bench charging
- The new Version 3 retains all these advantages and more. The more efficient power circuitry (California approved) now delivers 1 Amp of charge current and refinements in the software control further speeds charging – with the visual LED instructions on the charger itself helping keep the user informed of charge progress at a glance.

IRIDIUM SPARK PLUGS

BETTER METALS MEAN BETTER SPARK PLUG DESIGNS

- Six times harder than platinum, iridium doesn't melt in temperatures up to 4,000°F
- Because the iridium electrodes of these plugs can be shrunk to only 0.4mm, voltage requirements decrease while firing performance improves
- 360° laser welding of electrode provides a seal that resists wear, even in the worst conditions
- Ground electrode features a tapered cut and U-groove that form a large volume area for the flame's center
- Use NGK reference chart to order and stock these plugs

POWERMADD

E3 RESISTOR SPARK PLUGS

- Unique electrode shape maximizes the power created by the spark plug – Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is more complete combustion and an improvement in engine performance
- A truly premium performance plug
- Sold each

STARTERS

- High-quality, low-cost alternative to OEM starter motors
- Affordable starter is constructed with longer-life bearings than OEM
- Many OEM starter motors have an unprotected output needle bearing on the outside of the output shaft's seal; moisture can and does enter the output cap of the electric motor and follows the armature shaft to the unprotected output needle bearing, which corrodes the bearing
- Rick's takes the extra step of installing a double-sealed ball bearing, with the output shaft seal on the outside of the bearing in their new aftermarket unit
- This simple application of common-sense engineering does two things: first, the outside bearing is now protected from damaging water entry, and second, the sealed ball bearing is replaceable

KILL SWITCH HOW TO ORDER

NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open, (NO) or (2) Normally Closed, (NC).
Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated.
Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated.
NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier.
NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.

PIAA POWERSPORTS

HIGH-PERFORMANCE HALOGEN BULBS

- Because of their unique filament materials, reflective technology and proprietary coatings, PIAA bulbs offer far greater output than standard halogen bulbs
- While standard halogen bulbs give off a yellowish light that's not at all similar to sunlight, PIAA's technology gives off a whiter, brighter light or piercing amber light, enhancing visibility
- XTRA technology in Super Plasma bulbs allows light output to be dramatically higher than normal bulbs drawing the same wattage
- Each bulb is factory tested, ensuring it's within PIAA's extremely high manufacturing tolerances and performance standards

SUPER PLASMA GT-X

- For the look of HID there is nothing closer than the GT-X Super Plasma bulbs
- With the H4 shining at 3800 to 5000K (Kelvin Color Temperature), you will never sacrifice performance; with the XTRA technology, these bulbs have power to spare

XTREME WHITE

- Bulbs shine at 4150 Kelvin color temperature
- Closest in brightness to PIAA's High Intensity Discharge (HID) lights

DTS 129 DIRT-TO-SNOW BIKE CONVERSION TRACK SYSTEMS

- Dirt-to-snow bike conversion system allows riders to switch the front wheel of their off-road motorcycle with a ski and the rear drive systems with a tracked undercarriage
- Provides new heights of mobility and access in deep snow conditions that would otherwise be impossible with a conventional motorcycle
- Single rail suspension, allows rider to lean the track freely versus entire bike maintaining ride stability on hard and uneven surfaces
- Redesigned A-arm geometry, softer spring load and spring cam offer more travel and sag, reducing peak pressure on the front ski and enhancing riders control in rough trail conditions
- Optimum front pivot point location for better vehicle integration, maintaining overall riding dynamics closer than wheel vehicle
- Lightweight polymer blow mold base with steel reinforcements absorbs impact and improves overall handling and performance
- T-slot type Hyfax is easy to maintain and can be changed without taking suspension out
- Tapered wheel support allows constant transition when leaning for a natural bike riding feeling
- Newly redesigned, more durable side panel design features an integrated wrap-around tube and chain cover to protect critical components from impact
- Side panels allow more room around bike footpeg for better boot location and a more natural ergonomic position
- Subframe is constructed from lightweight and strong steel tubing and has a built-in rear bumper/grab bar that is ergonomically angled to reduce force required when pulling
- Dual-chain tensioner is a lightweight design allowing rider to perform primary and secondary chain adjustment individually
- Brake system is isolated from snow with a NEW polymer brake shield
- NEW Pre-bled brake system consists of an inboard double piston radial brake caliper for quick, compact braking power, a compact design 150mm brake disc that resists ice build-up and a right-hand master cylinder that is easy and quick to install to ensure an exact braking system calibration
- 129" L x 12.5" W track with 2.5" lug height specifically designed for Dirt-to-Snow, giving the rider great deep snow performance
- Built-in rear flap and backpack/accessory anchor on the rear
- Front ski-mount has angle side keel with replaceable blade for side hill capabilities, dual aggressive carbide for precise technical riding and an oversized handle that is easy to grab
- All black look
