# 2020 PARTS & ACCESSORIES For Indian Motorcycle International, LLC

## **Indian FTR 1200**

## **Custom Flat Track Bike**

Can one bike pull double duty for two brands? When it is as wild as the Drag Specialties/Parts Unlimited Indian FTR 1200 flat track racer cover bike, yes! This stunning custom build captures powersports excitement and showcases the strong support Drag Specialties and Parts Unlimited have for the industry.

A lot of the credit for conceiving the concept of a dual-branded cover bike belongs to the folks at Drag Specialties! "They came up with the general idea and S&S drew up an initial rendering and between the two the overall design really came together nicely, filling everone's needs!" says S&S VP of marketing David Zemla.

The style of the FTR 1200 lends itself to being a dual-brand marketing platform. It has the American V-Twin engine and Indian name and heritage, combined with the hooligan/flat track look, style and performance that speak to Drag Specialties and Parts Unlimited powersports enthusiasts. They all like torquey, fast and sleek race machines.

The build was done in-house by S&S Cycles in Viola, Wisconsin. The bike has been modified in the "hooligan" or flat track style with a number of very special parts. Take a close look: the triple clamps,

gauge mount, gas tank, rear seat unit and swingarm are all S&S one-off pieces. "We were asked to do a very small batch of FTR 1200 bikes as hooligan racers," Zemla says. "This bike has a lot of those pieces, making it one of a very few in the world."

One of the biggest changes is the side plates. "In order to get the foot controls positioned right for hooligan/flat track racing, you have to move them. Well, the footpeg and foot control mounts on the stocker are built into the side plates, so we machined new mounts in-house so we could get the pegs and controls set to the right positions. Each of those mounts takes something like two days to machine," Zemla says with a chuckle.

The split paint theme highlights the two brands. "When we first created the renderings for the paint, we knew the finished bike would look pretty wild." The final paint was done by Artistimo Custom Design in Waukesha, Wisconsin. Their work really fine-tuned the original renderings into a stunning work of mechanical art. "The final paint work made it even more impressive," Zemla says. "It is a really unique and beautiful bike."

### **RADIUSX CLUTCH KIT**

- RadiusX is a high-performance centrifugal auto clutch combining Rekluse's TorqDrive® and EXP technologies
- TorqDrive provides more clutch disks in less space, allowing for maximum performance within the bike's existing clutch footprint
- Full clutch control and use of the lever is retained for a no-compromise riding experience
- RadiusX offers dead-on clutch engagement every time and allows riders to take off and stop in gear without using the clutch lever
- Riders will experience maximum power delivery
- Rekluse TorqDrive friction disks deliver higher torque capacity and increased power transfer
- With RadiusX, you'll confidently navigate traffic and slow speed conditions

- Rekluse sleeves eliminate basket wear and notching
- Installing RadiusX does not require modification to stock components
- Shifting the transmission remains unchanged (clutch lever use is recommended for shifting)

ORGANIC

pads for most bikes from the late 1970s to the present
• Sintered metal brake pads are second-to-none in their stopping abilities and wear characteristics, while still providing excellent reduction in noise and dust

• Sintered metal brake pads are the OEM-type replacement

 Organic pads are OEM-type replacement brake pads for 1970s and earlier models

 Organic pads with aramid high-performance fibers are the perfect choice for polished or chromed rotors and billet steel rotors

 Both compounds of Drag Specialties brake pads are asbestos-, nickel- and lead-free NOTE: If you are using aftermarket billet steel rotors, it is recommended you use our Organic pads with aramid high-performance fiber brake pads to avoid damage to them. Sintered pads are not recommended for billet steel rotors as the pad material is too aggressive for those rotors.

### BRAKES See chart for details

#### BRAKE PADS AND SHOES ORGANIC BRAKE PADS

- The world's #1 selling organic disc brake pads
- EBC Organic brake pads contain Aramid fibers; these are manmade high-performance fibers used widely for their light weight, high strength, abrasion resistance and thermal stability
- Aramid fibers have high strength-to-weight, thermal stability and abrasion resistance to provide advantages over cheaper steel fiber-based products
- Provide excellent stopping power without noise and rotor galling, even on polished rotors
- Fingertip control and strong, predictable brake response

#### **DOUBLE-H SINTERED METAL PADS**

- Feature the HH friction rating the highest in the industry
- Provide maximum brake effect and last twice as long as organic pads **SEMI-SINTERED "V" PADS**
- All-new semi-sintered construction containing 30% copper by weight within an organic matrix
- This design has the long life of a sintered pad with the great feel and are more rotor friendly than the more aggressive sintered pads

#### **DP BRAKES**

#### THE ORIGINAL SINTERED BRAKES

- DP Brakes brake pads are designed with sintered metal compounds to give your bike high-tech performance in all conditions
- Pads have a quick break-in period so you get maximum performance fast
- DP Brakes design and materials ensure consistent hard stops and fade-free performance
- Sintered metal compounds outlast more conventional organic or aramid fiber pads

#### STANDARD SINTERED METAL BRAKE PADS

- GG friction-rated and made with DP Brakes' proven sintered metal material
- Gray-colored aluminum oxide-based ceramic material on rear of backing plate keeps heat away from caliper piston and fluid in extreme conditions for fade-free performance
- Pad compound gives equal performance in wet or dry conditions
- Ideal replacement for street and touring machines where durability is the prime requirement
- No brake fade

**DP Sintered** 

SDP Sport HH+

#### **SPORT HH+ SUPERSPORT PADS**

- Powerful, industry-high HH+ friction rating with no mileage penalty
- High-tech ceramic heat shield eliminates brake fade
- Dust-free compound design
- Quick break-in so you get maximum braking ability fast
- · For front wheel use only

#### **EZ-ALIGN BRAIDED FRONT BRAKE LINES**

- E-Z Align rotating caliper banjo feature for perfect no-kink fitments
- All fittings are polished and chrome or black chrome plated
- The industry's highest quality braid available in two color choices to complement your bike; Sterling Chromite®II and Black Pearl braided with black wire
- Braid color and weave match on all Magnum control cables and brake lines
- Crystal-clear outer jacket offers exceptional protection against scuffing paint or chrome and will never discolor
- Inner PTFE tubing braided with aramid fiber greatly reduces line expansion and provides the ultimate in high performance
- Brake lines are constructed with PTFE inner tubing, DuPont™ Kevlar® aramid fiber, premium Signature Magnum braids and an outer PVC iacket

DuPont™ and Kevlar® are trademarks or registered trademarks of E.I. du Pont de Nemours and Company.

#### **FLO STAINLESS STEEL REUSABLE "SPIN-ON" OIL FILTER**

- Made from laser-cut, medical-grade, 304 stainless steel micronic filter cloth, this filter provides 200% more filter area in many cases
- Stainless filter catches items down to 35 microns, which is about three times better than most good paper or brass filters
- Unlike glued paper filters, the FLO Oil Filter pleat seam is welded and able to withstand up to 600° F
- Filter maintains consistent flow under all conditions including extreme heat, the presence of water, and cold start-ups where paper filters can flow so poorly that they often cause the bypass valve to open and allow unfiltered oil to enter your engine
- Should be the last filter an owner ever needs; this high-tech filter technology is widely used in all types of auto racing including NASCAR, Indy-type cars, Formula 1 and in the aerospace industry where filtration is of the utmost importance
- FLO reference # PCS1

#### MANUAL OIL BYPASS VALVE

- Acts as a manual thermostat, allowing you to bypass the oil cooling system for cold-weather riding or for faster warm-ups on cool days
- Durable, anodized billet aluminum construction
- Knurled grip knob
- Works with all oil coolers
- Compact in-line installation
- Service kit contains replacement O-rings, snap-ring retaining clip for manual bypass knob and spare decal

NOTE: If oil hoses between the oil cooler and the oil source are too short, the oil cooler bypass valve may not fit in the oil lines. Jagg bypass valves require at least 76 mm (3") of straight hose.

#### **FORK LOWERING KITS**

- Give Cruiser bike front ends that custom lowered look by lowering the forks
- Your choice of 25 mm (1") or 51 mm (2") lowering height is available at time of installation
- To maintain proper balanced geometry, it is recommended lowering the rear of the bike the same amount as the front (Progressive Suspension Series shocks available for lowering the rear); see pages 92-93
- Installing a lowering kit will decrease initial ground clearance; motorcycle will be lower to the ground. and care should be taken to avoid bottoming, especially over bumps or in turns

Progressively wound

- The threaded preload adjustment and external compression adjustment knob allow for fine-tuning to provide optimum performance for rider weight or riding style
- 305 mm L (12")

#### **444 SERIES**

- Features the all new Frequency Sensing Technology (FST) which allows the shocks to sense the frequency of a bump and automatically adjust damping for superior ride quality
- Deflective disc valving
- Adjust spring pre-load by hand, no special tool needed
- Includes a progressive rate spring and is high-pressure gas charged for consistent performance
- Standard or heavy duty spring rate with a black or chrome finish
- Sold in pairs
- NOTE: A shock which is slightly longer than stock may alter the head angle slightly and provide somewhat quicker steering.
- NOTE: A shock which is slightly shorter than stock may slightly alter the head angle and provide somewhat slower steering.
- NOTE: Heavy Duty Applications are recommended for bikes that are operated at or near the manufacturer's maximum load rating over 50% of the time.

NOTE: Before purchasing or attempting to install shocks that are different than the OEM length, confirm that your wheel travel can be altered without causing clearance issues such as swingarm/axle to exhaust contact as well as chain/belt guard or tire contact.

#### **WIRE GAUGE SELECTOR**

It's important to match up wire diameter and current properly. To choose the right gauge wire, you will need to know how much Wattage (or Amperage) you will draw and what the length of the cable will be.

NOTE: The chart below is based on a 12V system. To find the appropriate wire for 6V systems, the Amp and Watt numbers should be divided in half.

AMP.	WATT	91 CM (3 FT)	152 CM (5 FT)	213 CM (7 FT)	305 CM (10 FT)	457 CM (15 FT)

#### **DISPLACEMENT**

Bore x bore x stroke x 1.5708 = Displacement in Cubic Inches Bore x bore x stroke x 25,744019 = Displacement in Cubic CentimetersExample: A stock 96" Twin Cam has a bore of 3,750" and a stroke of 4,375".

Formula: 3,750" x 3,750" x 4,375" x 1,5708 = 96,64 cubic inch

3,750" x 3,750" x 4,375" x 25,744019 = 1583,86cc

Ratio = Cylinder displacement plus combustion chamber volume divided by combustion chamber volume.

Example: A 96" cubic inch Twin Cam has 794cc per cylinder. Combustion chamber volume is approximately 86cc.

Formula: 794 + 86 = 880 : 86 = 10,2:1 Compression Ratio (CR) Note: When calculating compression ratio, do not forget to include gasket thickness, valve pockets and ringlands in the piston. CC-ing the heads, filling them with fluid after heads have been installed, will give you accurate numbers.

Bore x bore x 12,87 x compressed gasket thickness = **Gasket volume in cubic centimeters** Example: A head gasket has a thickness of 0,045"; bore is 3,750".Formula: 3,750" x 3,750" x 12,87 x 0,045" = 8,144cc

#### **AREA OF CIRCLE**

The radius is the diameter of a circle divided in half.

Radius x radius x 3,1416 = Area of a circle

Example: A stock 96" Twin Cam has a bore of 3,750".

Formula: 1.875" x 1.875" x 3.1416 = 11.05 lnch2

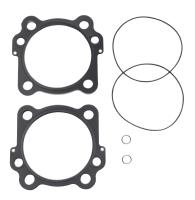

47,63 mm x 47,63 mm x 3,1416 = 7127,09 mm<sup>2</sup> (71,271 cm<sup>2</sup>)

#### **ELECTRICAL: AMPERAGE, WATT AND VOLTS**

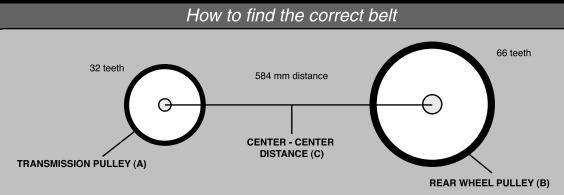

Understanding electrical current is important to prevent a meltdown within the electrical wiring of a motorcycle. It is useful to calculate what fuse you will need for a certain application.

Watt divided by Volt = Amp Amp multiplied by Volt = Watt Watt divided by Amp = Volt

#### Formula

A = number of tooth transmission pulley

**B** = number of tooth rear wheel pulley

C = center to center distance between both pulleys

#### THE 3-STEP BELT FORMULA

**Step 1)** 
$$\frac{(C \times 2)}{13.8} = D$$

Step 2) 
$$\frac{A+B}{2} = E$$

D + E = Number of teethStep 3)

#### Example

Transmission pulley has 32 tooth Rear wheel pulley has 66 tooth Center to center distance is 584 mm

**Step 1)** 
$$\frac{584 \text{ X } 2 = 1168}{13,8 \text{ (belt pitch)}} = 84,6$$

**Step 2)** 
$$\frac{32+66}{2}=49$$

**Step 3)** 84,6 + 49 = 133,6 teeth

This means you must use a 133 tooth belt, because 137 tooth is not manufactured
