PARTS & ACCESSORIES For Indian Motorcycles Indian® is a registered trademark of Indian Motorcycle International, LLC

The 2021 Indian Catalog Bike was designed and built by Drag Specialties brand ambassador Carey Hart. Hart is probably best known for his freestyle motocross competition championships and as the first rider to attempt the backflip in freestyle motocross. He's also had a long-term interest in American V-Twin motorcycles.

"I have always been a fan of the V-Twins," Hart says. He has owned baggers and built custom bikes. But a ride on a friend's Indian Chieftain in 2016 really sparked his interest in the Indian brand. "I really liked his bike, the feel of it, even on slippery stock tires. And when I looked into the brand, the direction they were going ... I was the one that actually pursued Indian motorcycles to be a partner with them."

That partnership leads up to Hart being involved with the Indian Challenger model introduction. He rode the new model at the official launch and was hooked on the bike. "It was just so good," he says.

"The chassis and the motor were terrific. I did almost 400 miles on one at the press ride and asked Indian right there if I could have one. The platform was just great."

Hart took the racer's approach to modifying the bike. He looked at how to build up the bike with an eye to improving the already strong stock package. "Nothing too crazy with the motor," he says. It made good, usable power. He wanted to improve the bike's handling and suspension, and trim some of the weight for overall performance gains. "A racer will want a light, well-balanced, good handling and strong stopping motorcycle over one with just a crazy powerful engine," he says.

A lot of time was spent on the front end. Hart worked with GP Suspension's Jake Zemke to get the front forks dialed in with custom valving, tuning and fork leg friction coatings to improve response and feel. The brakes were enhanced with Brembo Monobloc calipers, Beringer brake discs

and custom hand controls. The goal was to improve the bike's handling and responsiveness.

"I have tiny motocross hands," Hart says with a chuckle. "So I wanted to switch out some things so I had a more comfortable feel and grip at the controls. Now, one finger on the front brake lever and it STOPS."

Additional custom parts include an impressive all-titanium custom exhaust system, a set of highrise handlebars and a custom fastback seat from Saddlemen. The bike rides on a set of carbon fiber wheels that run on Dunlop performance tires.

Hart wanted a paint scheme that implied high performance and to give the bike a look that it was fast, even standing still. "I like the look of the 80s and 90s Grand Prix bikes," Hart says. "They look fast, and have simple, clean block pattern graphics that aren't too busy for a neat, classy look that says performance."

And what is it like to ride? "The bike is STRONG," Hart says. "It hauls! It is more like a sport bike, really. It is very well-balanced. I really cannot say enough about what a terrific package the Challenger is."

MEMPHIS SHADES BULLET FAIRINGS

- Strong, one-piece fairings constructed of high-impact aircraft-grade Lucite®
- Bold aerodynamic shape with a hint of outlaw styling designed to streamline today's low-slung cruisers
- Provide full torso coverage to virtually eliminate wind fatigue while allowing an unobstructed view of the countryside; your head is in clean air
- A machined groove outlines the smoke windshield section

FITS MODEL

 The lower section features an opaque glare-free matte coating on the inside that gives the outside a high-gloss black "factory" finish for a clean two-piece look; looks great as is, or can be easily painted to really achieve the next level of custom

DOMINATOR SOLO SEAT

- Combines GelCore[™] interior, progressive-density foam and a Gel Channel[™]-design cover to provide riders with unparalleled comfort, control and modern style
- Seats using Saddlemen's Gel Channel (GC) technology have a center channel that relieves seating pressure on the perineal area, increasing blood flow, thus keeping the rider comfortable in the saddle for longer time
- In addition to pressure relief, the GC-style center of the seat provides an airflow passage
- The rugged carbon fiber weave and smooth vinyl cover holds up to hard use and still retains its good looks
- Using a very large gel pad for additional foam support and vibration damping, this GC-style seat offers the comfort levels normally found in larger touring seats
- Marine-grade fiberglass pans and chrome brackets make sure the seat is durable for decades of riding

• Easy to install; some seats and pillion pads include additional mounting hardware as needed

• The matching optional driver's backrest installs in seconds without using tools and can be adjusted both horizontally and vertically to the rider's back and is removable for a sleek appearance

All Rekluse clutch products are precision-engineered and made of high-quality materials to provide the best in performance and durability. Their components are stronger, lighter, longer-lasting and built for maximum performance. Rekluse's industry-leading auto clutches are optimized for each bike model as it comes from the factory and they've designed each clutch to be fine-tuned for every rider. Rekluse's manual clutches deliver unprecedented performance, tuning and durability with a design that provides more disks in less space, allowing up to four additional friction disks over stock.

DERBY COVERS

• Billet aluminum construction provides increased durability

 Designed to match OEM specifications, they bolt on with no modifications or drilling

· Available in gloss black or wrinkle black powdercoating

• Fits over any Rekluse or OEM clutch

Choose from chrome or black finish

- Bring the stock handlebar location back toward the rider by approximately 50,8 mm (2")
- These risers are a great option for riders who want to get more upright in the seat and/or get weight off of their arms, neck, and shoulders
- Work with stock cables on the Indian Chieftain/Roadmaster
- Riser positioning will be limited by the large OEM fairing assembly
- Black anodized finish

NOTE: Will not work on 17-21 models with Ride Command. US Patent #6,920,806.

> > **14" OFFSET FRONT BRAKE ROTOR**• Add braking performance and style

• 14" front rotor is drastically larger than stock, resulting in improved braking performance

· Great way to improve the look of your bike; adds

a race-style upgrade to the front wheel

or bleeding of the front brakes

Bolt-on installation: requires no fabrication

• Billet brake caliper adapter included to relocate factory brake caliper

| 1710-3220 | For 15-18 Scout/Sixty/Bobber without ABS |

1721-1360

1720-0209

 Both compounds of Drag Specialties brake pads are asbestos-, nickel- and lead-free

NOTE: If you are using aftermarket billet steel rotors, it is recommended you use our Organic pads with aramid high-performance fiber brake pads to avoid damage to them. Sintered pads are not recommended for billet steel rotors as the pad material is too aggressive for those rotors.

• Organic pads with aramid high-performance fibers are the perfect

choice for polished or chromed rotors and billet steel rotors

• Sintered metal brake pads are the OEM-type replacement

pads for most bikes from the late 1970s to the present

Sintered metal brake pads are second-to-none in their

stopping abilities and wear characteristics, while still

providing excellent reduction in noise and dust

Organic pads are OEM-type replacement brake

pads for 1970s and earlier models

Organic pads

Double-H sintered pads

Semi-sintered "V" pads

DOUBLE-H SINTERED METAL PADS

- Feature the HH friction rating the highest in the industry
- Provide maximum brake effect and last twice as long as organic pads

SEMI-SINTERED "V" PADS

- All-new semi-sintered construction containing 30% copper by weight within an organic matrix
- This design has the long life of a sintered pad with the great feel and are more rotor-friendly than the more aggressive sintered pads
- Can be used to replace organic or sintered metal compound pads

BRAKE PADS AND SHOES ORGANIC BRAKE PADS

- The world's #1 selling organic disc brake pads
- EBC Organic brake pads contain Aramid fibers; these are manmade high-performance fibers used widely for their light weight, high strength, abrasion resistance and thermal stability
- Aramid fibers have high strength-to-weight, thermal stability and abrasion resistance to provide advantages over cheaper steel fiber-based products
- Provide excellent stopping power without noise and rotor galling, even on polished rotors
- Fingertip control and strong, predictable brake response

THE ORIGINAL SINTERED BRAKES

• DP Brakes brake pads are designed with

sintered metal compounds to give your bike high-tech performance in all conditions • Pads have a quick break-in period so you get maximum performance fast

conventional organic or aramid fiber pads

 GG friction-rated and made with DP Brakes' proven sintered metal material

STANDARD SINTERED METAL BRAKE PADS

• Gray-colored aluminum oxide-based ceramic material on rear

• Pad compound gives equal performance in wet or dry conditions

of backing plate keeps heat away from caliper piston and

fluid in extreme conditions for fade-free performance

• Ideal replacement for street and touring machines where durability is the prime requirement

 DP Brakes design and materials ensure consistent hard stops and fade-free performance

BRAIDED FRONT UPPER ABS BRAKE LINES

- The industry's highest quality braid available in two color choices to complement your bike; Sterling Chromite®II and Black Pearl with real black wire braid
- Available in stock and plus lengths for most ABS Chief, Challenger and Scout models
- Inner PTFE tubing braided with aramid fiber greatly reduces line expansion and provides the ultimate in high performance
- E-Z Align rotating line fittings for perfect no-kink fitments
- All fittings are polished and chrome or black chrome-plated
- Braid color and weave match on all Magnum control cables and brake lines

STERLING CHROMITE II

- Crystal-clear outer jacket offers exceptional protection against scuffing paint or chrome and will never discolor
- Brake lines are constructed with PTFE inner tubing, DuPont™ Kevlar® aramid fiber, premium Signature Magnum braids and an outer PVC jacket

DuPont™ and Kevlar® are trademarks or registered trademarks of E.I. du Pont de Nemours and Company.

NOTE: ABS kits contain either an upper brake line assembly to connect the ABS controller to the master cylinder or a lower brake line assembly to connect the controller to the caliper.

NOTE: ABS lower kits are optional and are not required for upper line installation.

FLO STAINLESS STEEL, REUSABLE "SPIN-ON" OIL FILTER

- Made from laser-cut, medical-grade, 304 stainless steel micronic filter cloth, this filter provides 200% more filter area in many cases
- Stainless filter catches items down to 35 microns, which is about three times better than most good paper or brass filters
- Unlike glued paper filters, the FLO Oil Filter pleat seam is welded and able to withstand up to 600° F
- Filter maintains consistent flow under all conditions including extreme heat, the presence of water, and cold start-ups where paper filters can flow so poorly that they often cause the bypass valve to open and allow unfiltered oil to enter your engine

MANUAL OIL BYPASS VALVE

- Acts as a manual thermostat, allowing you to bypass the oil cooling system for cold-weather riding or for faster warm-ups on cool days
- Durable, anodized billet aluminum construction
- Knurled grip knob
- Works with all oil coolers
- Compact in-line installation
- Service kit contains replacement 0-rings, snap-ring retaining clip for manual bypass knob and spare decal

NOTE: If oil hoses between the oil cooler and the oil source are too short, the oil cooler bypass valve may not fit in the oil lines. Jagg bypass valves require at least 76 mm (3") of straight hose.

LEGEND REVO-A COIL SUSPENSION

- Provides improved plush ride quality, control and resistance to bottoming out
- Extended coil length has larger "sweet spot" without increasing overall shock length
- Unique spring rate offers the ability to soften preload, reducing ride height and maintaining a smooth ride
- Allows minimal preload adjustments when changing between riders' weights or loads
- Adjusts by hand, no tools needed
- Easy installation
- Suspension alignment is provided by spherical bearings on both top and bottom

- \bullet External knob has six adjustments to allow fine-tuning of rebound
- Provides optimum rebound performance for any given rider weight, personal ride quality preference or personal riding style
- Light to heavy riders can fine-tune ride preference
- Black finish

NOTE: For solo rider only, with total weight of 113 kg (250 lb) or less.

WIRE GAUGE SELECTOR

It's important to match up wire diameter and current properly. To choose the right gauge wire, you will need to know how much Wattage (or Amperage) you will draw and what the length of the cable will be.

NOTE: The chart below is based on a 12V system. To find the appropriate wire for 6V systems, the Amp and Watt numbers should be divided in half.

| AMP. | WATT | 91 CM (3 FT) | 152 CM (5 FT) | 213 CM (7 FT) | 305 CM (10 FT) | 457 CM (15 FT) |

FORMULAS

DISPLACEMENT

Bore x bore x stroke x 1,5708 = Displacement in Cubic Inches
Bore x bore x stroke x 25,744019 = Displacement in Cubic Centimeters

Example: A stock 96" Twin Cam has a bore of 3,750" and a stroke of 4,375".

Formula: 3,750" x 3,750" x 4,375" x 1,5708 = 96,64 cubic inch

3,750" x 3,750" x 4,375" x 25,744019 = 1583,86cc

COMPRESSION RATIO

Ratio = Cylinder displacement plus combustion chamber volume divided by combustion chamber volume.

Example: A 96" cubic inch Twin Cam has 794cc per cylinder. Combustion chamber volume is approximately 86cc.

Formula: 794 + 86 = 880 : 86 = 10,2:1 Compression Ratio (CR)

Note: When calculating compression ratio, do not forget to include gasket thickness, valve pockets and ringlands in the piston. CC-ing the heads, filling them with fluid after heads have been installed, will give you accurate numbers.

HEAD/BASE GASKET VOLUME

Bore x bore x 12,87 x compressed gasket thickness =

Gasket volume in cubic centimeters

Example: A head gasket has a thickness of 0,045"; bore is 3,750".

Formula: 3,750" x 3,750" x 12,87 x 0,045" = 8,144cc

AREA OF CIRCLE

The radius is the diameter of a circle divided in half.

Radius x radius x 3,1416 = Area of a circle

Example: A stock 96" Twin Cam has a bore of 3,750".

Formula: 1,875" x 1,875" x 3,1416 = 11,05 Inch2

47,63 mm x 47,63 mm x 3,1416 = 7127,09 mm² (71,271 cm²)

ELECTRICAL: AMPERAGE, WATT AND VOLTS

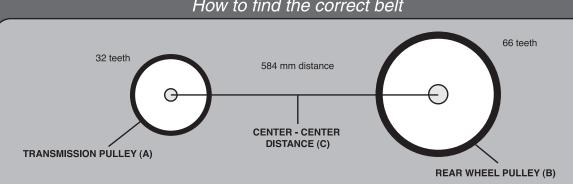

Understanding electrical current is important to prevent a meltdown within the electrical wiring of a motorcycle. It is useful to calculate what fuse you will need for a certain application.

Watt divided by Volt = Amp Amp multiplied by Volt = Watt Watt divided by Amp = Volt

- THE 3-STEP BELT FORMULA How to find the correct belt

Formula

A = number of tooth transmission pulley

B = number of tooth rear wheel pulley

C = center to center distance between both pulleys

THE 3-STEP BELT FORMULA

Step 1)
$$\frac{(C \times 2)}{13.8} = D$$

Step 2)
$$\frac{A+B}{2} = E$$

Step 3) D + E = Number of teeth

Example

Transmission pulley has 32 tooth Rear wheel pulley has 66 tooth Center to center distance is 584 mm

Step 1)
$$\frac{584 \times 2 = 1168}{13,8 \text{ (belt pitch)}} = 84,6$$

Step 2)
$$\frac{32+66}{2}=49$$

Step 3) 84,6 + 49 = 133,6 teeth

This means you must use a 133 tooth belt, because 137 tooth is not manufactured
