## POWER COMMANDER V

- Fuel and timing control
- Rev Xtend increases Rev limit
- The Power Commander V can read the exact engine temperature through the bike's ECM, which allows the tuner to choose how much fuel to add during cold starts
- Cold starting on heavily modified engines should be more controllable and easy to adjust
- USB powered from computer
- Two position map-switching function built in (switch not included)
- Can add any SPST switch and toggle between two different fuel/timing maps
- Gear/speed input allows for map adjustment based on gear
- Analog input allows user to install any 0-5 volt sensor
- Builds an adjustment table based on analog input, such as boost or temperature
- Power Commander V is capable of allowing each cylinder to be mapped individually and for each gear with the gear position input connected
- Ten throttle position columns
- World's largest dyno-tested map database
- Enhanced "accel pump" utility

## E3 RESISTOR SPARK PLUG

- Unique electrode shape maximizes the power created by the spark plug – Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is more complete combustion and an improvement in engine performance
- A truly premium performance plug
- Sold each
